

Paint Booth Monitoring Schedule

Recorded Checks

- Daily checks by the operators on filter performance.
- Daily checks by operators on cleanliness of spray bays to prevent fugitive emissions of VOCs.
- Weekly check by paint shop manager to ensure environment management is at a high standard.
- Monthly check by Health and Safety Manager to assess spray bay environmental performance including waste management

Each operator through induction, continuous training and experience knows how to identify if a fugitive aromas and report to local management for investigation.

All spillages will be cleaned up as per spillage response plan and investigated fully to prevent further occurrence.
